

Steam Sauna Inc.

Luxurious Lifestyle

Hammam Spa, ON

Since 1968,

SteamMaster™ brings upper level of luxury to your lifestyle!

Company Profile

As an industry-leading professional manufacturer, STEAM SAUNA INC. has been providing the most advanced energy-saving steam generators for over 35 years.

SteamMaster™ steam generators stand for quality and innovation. Each unit is designed, manufactured and tested to exacting specifications, ensuring the highest quality and efficiency in strict compliance with our ISO9001:2000 certification. SteamMaster™ is specified by leading architects and successfully used in prestigious projects such as hotels and resorts, universities and colleges, athletic and fitness clubs, golf and country clubs, health clubs and spas, condominiums and executive fitness rooms around the world. Our advanced technology also provides custom solutions for specialized applications like inhalation rooms, aroma therapy rooms, etc.

Our commitment to constant improvement and technological innovation has earned us repeat customers and, more importantly, satisfied end users. All our products are backed by superior customer service and also ISO quality management system approved by QAS-International.

SteamMaster™

2-in-1 System

The exclusive SteamMaster™ hands-free 2-in-1 System is two operating units built into one, designed to keep the room hot and always full of steam for the complete satisfaction of your club members.

In the 2-in-1 System:

- ❖ The primary and secondary systems work together to bring the room up to the desired preset temperature when the unit starts in the morning
- ❖ The thermostat shuts off the secondary system at the preset temperature, leaving the primary system to run constantly, keeping the room always full of steam
- ❖ The secondary system kicks in whenever the thermostat calls for more heat

2-in-1 System

Introducing Energy Saving Star

Digital Control

SteamMaster™ generators are equipped with a programmable CPU for advanced multi-stage operation. **Take control of power savings with smart energy solutions:**

- ❖ The compact design of the Energy Saving Star optimizes energy efficiency
- ❖ The multi-stage operating system results in lower energy consumption
- ❖ Our advanced technology achieves higher performance with lower kilowatt rating
- ❖ Its LCD digital controller programs your way to **saving energy**

This is what your members want – A Room Always Full of Steam!

Capacity Comparison Chart

Steam Room	SteamMaster™	Other Manufacturers
10' x 10' x 7.5'	ES 12 (12 KW)*	18 KW
15' x 10' x 7.5'	ES 18 (18 KW)*	30 KW

SteamMaster™ - A combination of exclusive features

The breakthrough you have been waiting for!

Stand-by Binary System

The SteamMaster™ Stand-by Binary System is a perfect choice for instant or non-stop performance, combined with energy savings. This unique feature provides you with the option of standby and binary stage systems.

When you use stand-by mode:

- ❖ You provide steam at the user's demand
- ❖ You give your customers instant steam – no waiting time

When you use binary mode:

- ❖ You have the flexibility of dual temperature settings
- ❖ The steam unit heats up the steam room to the first stage of the preset temperature
- ❖ With the touch of a button or the dial timer, the primary temperature setting jumps to the secondary stage, and the unit starts pumping extra steam

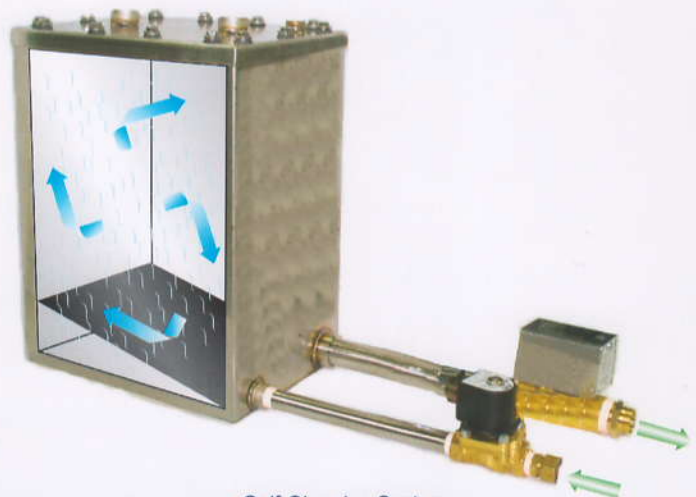

Digital Control

Self-Cleaning System

The exclusive SteamMaster™ Self-Cleaning System is designed to extend the life expectancy of your unit by keeping it clean. The Self-Cleaning System:

- ❖ Uses city water pressure to power flush through the unique sloped bottom of the boiling tank at the end of each working day, or as required
- ❖ Repeats the cleaning cycle 10 times in 30 minutes
- ❖ Completely flushes out sediments
- ❖ Ensures optimum efficiency and peak performance

Self-Cleaning System

Built-in Drain Cooling System

The innovative technology of the SteamMaster™ Built-In Drain Cooling System cools down hot water before flushing it out of the unit. The Drain Cooling System:

- ❖ Ensures that only pre-cooled water is flushed through the motorized drain valve
- ❖ Eliminates the need for cool down tanks
- ❖ **Saves money**
